You can copy the address book to the new machine to replace the default file. The address book path is specified in the Options | General tab. You should copy these files: Schedule settings file sched.dat, Quick Connection history file quick.dat, SSL/TLS certificate cache file cert.dat, SSH host public key cache file sshhost.ini.

Also, you can transfer the complete program installation folder to new PC, you need to enter the registration key again. NT service has to be installed again.
