You can view the schedule task reports in the Task Scheduler dialog. Use button "Scheduler Log" to view global schedule log showing the startup and termination of all tasks; use button "Task Log" to see full raw log of the individual schedule task currently selected in the Scheduler. If you are running Sync Service as NT service, the global schedule log is also dumped to NT event log. You can also have a notification email sent to you upon completion of each schedule task (menu [Tools | Email Notification]).
